Speed Bumps and End Caps are made of 100% post-consumer recycled tire rubber from used car and truck tires. A 3% MD400 polyurethane is used as a binder.

The yellow stripes are made from road marking tape. Optional cat eye reflectors are for nighttime visibility. There are 8 per 6' speed bump, they are a highly reflective glass bead and have never been reported to come out.

These 52 pound rubber speed bumps are light enough for easy installation by a single installer. Made in Eugene Oregon, USA with raw material from less than 450 miles away. Each 12 pounds of product you buy saves one passenger tire from a landfill.

Hardware installation holes are drilled with a 1/2" drill bit.

Hardware available: 14" x 1/2" rebar spike with 5/8" washer for asphalt or gravel installations. 4 1/2" x 1/2" lag screw, washer and short shield for concrete installations.

Use 10 ounce of epoxy or construction adhesive (i.e. Polyurethane PL Premium) for installations where no hardware is allowed. When installing on sloped surfaces regular maintenance may include re-application of adhesive.

Not recommended in traffic areas with speeds over 15 mph. In traffic areas with more than 4 heavy trucks per day, use adhesive in addition to hardware for installation.
